Doctors have sued the FDA for illegally approving the chemical abortion drug regimen & failing to meet its legal obligation to protect girls & women.

It is clear that the FDA has put politics over the health and safety of women.

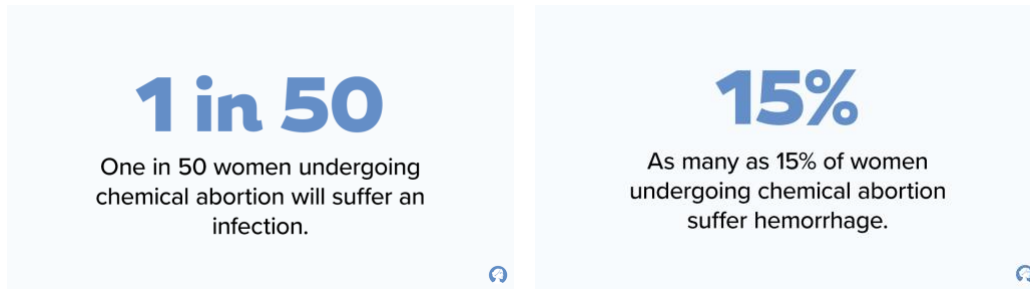

Did you know that to approve the abortion pill regimen with its accelerated drug approval authority, the FDA classified pregnancy as an “illness” and the abortion pills as a treatment?

Pregnancy is not an illness. Death is not a treatment.

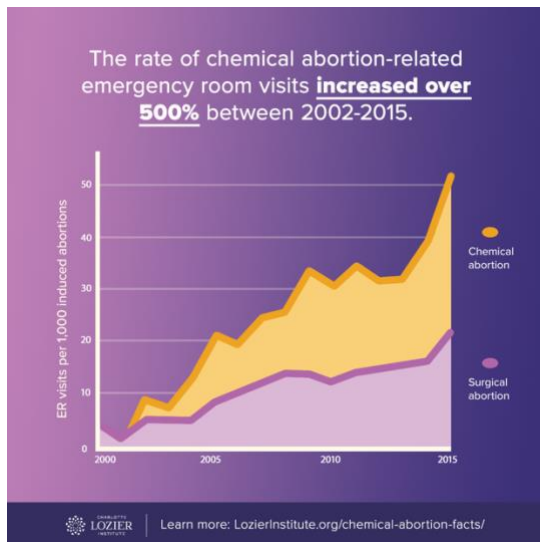

The FDA has been challenged about their approval of abortion drugs going all the way back to the late '90s, but they have ignored opposition & citizen petitions for decades now while the data on the dangers of these drugs has piled up.

Accountability is long overdue.

If the FDA did its job by looking at the available data, conducting focus studies on minors and charting drug side effects (other than death) it would see that mifepristone is not safe.

How dangerous is the abortion pill regimen?

Federal data show that the rate of chemical abortion related emergency room visits is up more than 500% since Mifepristone was approved.
